COMPLETE SPECIFICATION.

An Improved Brush for Cleaning the Mud Guards of Cycles.

I, DAVID PROUDFOOT BLEASBY, 40, Arbour Street, Southport, African Trader, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement :—

My invention relates to an improved brush for cleaning the mud guards of cycles as hereinafter described.

According to my invention I provide a curved brush which is adapted to be attached to the periphery of the wheel by straps or springs; said brush when the wheel is revolved thoroughly and efficiently cleans the inside of the mud guard.

The accompanying drawing is a perspective view of a brush constructed according to my invention.

A is the back, B are the bristles, fibre or the like and C are straps for securing the brush on the periphery of the wheel when it is desired to clean the mud guard. The thickness of the back and length of the bristles or the like are arranged to suit the distance between the wheel and guard.

Instead of straps I may provide spring clips of any suitable design for securing the brush in position on the wheel.

I have shewn the brush as being curved in the transverse direction only to fit the tyre or rim, but in some cases more especially where the brushes are intended for use with wheels of small diameter I make the brush curved lengthwise to fit the periphery.

By my invention the cleaning of the inside of a mud guard is very readily accomplished without the necessity of removing the guard from the machine.

Having now particularly described and ascertained the nature of my said invention and in what manner the same is to be performed, I declare that what I claim is :—

1. For cleaning the inside of a mud guard, a brush provided with means for attachment to the periphery of the wheel and operating as described.
